

Amador-Calaveras Consensus Group Monitoring & Science Symposium

November 8, 2017 | Jackson, CA | 8:00 am – 5:00 pm

Symposium Goal: The goal of this symposium is to better understand and promote effective collaborative-based forest management. The Amador-Calaveras Consensus Group (ACCG) is a community-based organization that works to create fire-safe communities, healthy forests and watersheds, and sustainable local economies. Cornerstone is a USFS Collaborative Forest Restoration (CFLR) program project. In 2016, the ACCG completed a Cornerstone collaborative forest landscape restoration project monitoring strategy. This symposium will provide knowledge of ongoing work and will present findings from monitoring and research occurring within the ACCG footprint. Discussion sections will provide the opportunity for collaboration on the implications of the work and how to apply this knowledge to management.

Location: Amador County Department of Health and Human Services 10877 Conductor Blvd. Sutter Creek, CA

Presented by: US Forest Service Ecology Program and the California Fire Science Consortium

Audience: ACCG members, land managers, researchers, regulators, planners and decisions makers.
