Amador-Calaveras Consensus Group

2023 ACCG Strengths, Weaknesses, Opportunities, and Threats (SWOT) Analysis

Last updated: 8/07/2023

The ACCG's Strengths, Weaknesses, Opportunities, and Threats (SWOT) Analysis forms the basis for determining our current status, deciding where we want to be in five years, and developing our goals for getting there. The SWOT analysis is available on the website (insert link here).

	Strengths	Weaknesses
0	Collaborative processes	 Consensus difficult to achieve in controversial errors due to conflicting
0	Consensus decisions	controversial areas due to conflicting
0	Structure, principles, MOA	views, positions, and levels of knowledge
0	Track record of engagement and success	 Time-consuming collaborative decision-making
0	Engagement and involvement with	process
	diverse groups and individuals	 Local communities not very familiar with ACCG
0	Deep understanding of local issues	or its mission
0	Breadth and depth of knowledge among	 Lower than optimal number of MOA
	members	signatories
0	Diversity of participants and interests	 Low participation from communities,
0	Support, appreciation, and engagement of	organizations, businesses, tribes, etc.
	agencies	 Collaboration challenges across the
0	Fostering new partnerships	various ownership boundaries and
		jurisdictions
		 Collaboration challenges between ENF and
		STF
	Opportunities	Threats
0	Pursue funding opportunities;	 Conflicting values on certain issues
	support/write more grants	 Budget constraints
0	support/write more grants Increase participation with new MOA and	 Budget constraints Fires, floods, pest infestations
0		
0	Increase participation with new MOA and	 Fires, floods, pest infestations
	Increase participation with new MOA and outreach efforts	 Fires, floods, pest infestations Declining participation of long-term
	Increase participation with new MOA and outreach efforts Identify and learn about partnership and	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge)
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration,	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0 0 0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0 0 0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0 0 0 0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact and capacity	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
0 0 0 0	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact and capacity Recently expanded funding sources available	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact and capacity Recently expanded funding sources available for fire safety and forest projects	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact and capacity Recently expanded funding sources available for fire safety and forest projects Use our collaborative skills to build alliances	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
	Increase participation with new MOA and outreach efforts Identify and learn about partnership and contracting options Increase scope to all-lands watershed-scale projects Improve processes for collaboration, consensus, project support Identify potential new projects and support implementation of projects Socioeconomic monitoring to identify impact and capacity Recently expanded funding sources available for fire safety and forest projects Use our collaborative skills to build alliances with multiple organizations rather than	 Fires, floods, pest infestations Declining participation of long-term members/change over in membership (loss of institutional knowledge) High FS turnover, resulting in low staff capacity and loss of knowledge Difficulty in increasing scope to all-lands
